2 CT Sea Grant and UConn Extension

2 Town of Fairfield

4 University of Connecticut, Department of Marine Sciences

5 Copps Island Oysters

6 Curbside Compost

Why Shell Recycling?

- Shell is the foundation of healthy oyster beds
- Healthy oyster beds provide ecosystem services:
 - Improve water quality
 - Provide habitat for marine organism
 - Provide shoreline erosion control
 - supply seed for aquaculture farms
 - Improve capture fishery production
- Shell in short supply

Motivations

Environmental (let's save the environment!)

Marketing (more customers, more oysters sold!)

Cost savings (costs money to throw away shell)

Financial incentives (e.g., tax breaks)

Hurdles to CT Shell Recycling

The state lacks a formal shell recycling program.

Costly to haul

Limited options for storing and curing

Required Agreements and Authorizations for Transfer Stations

Strict Regulatory Guidance for Curing

Exploring Potential Models

Model 1

Copps Island

Farm

Model 2

Fairfield

Town

Model 3

Groton

Non-profit

Model 4

CORR

Non-profit

Model 5

Curbside
Compost LLC

For-profit

Model 1

Shell source

Farm

Collector

Farm

End User

Farm

Authorizations

Local, State

Pros

Supports single farm only

Cons

No public benefit

Model 2

Shell source

Private/Public

Collector

Town (via Conservation/Shellfish Commission)

End User

Town

Authorizations

DABA, town (internal)

Pros

Town may cover some/all costs
Town may be able to allocate space
Lower transportation costs
Local engagement

Cons

Volunteer-based (not financially sustainable)
Limited Municipal Support

Model 3

Zofia Baumann, UConn

Shell source

Private/Public

Collector

Non-profit

End User

Town

Authorizations

DABA, DEEP, Town

Pros

Town may cover some costs

Cons

Grant funded (not financially sustainable)
Need agreements with town departments and shell sources

Model 4

Shell source

Private/Public

Collector

Non-profit in partnership with town

End User

Town (default); non-profit

Authorizations

DABA, DEEP, Towns (multiple)

Pros

Assist towns with creating recycling programs
Facilitate collection, transportation, and storage of shell
Provide assistance with restoration projects and use of shell

Cons

Small scale start-up
Funding challenges – grants private funding
Maintaining long-term engagement with volunteers

Model 5

Shell source

Private/Public

Collector

For Profit

End User

For Profit

Authorizations

Local, State

Pros

Dedicated staff
Limited regulatory agreements
Established infrastructure
Potential to reach individual households

Cons

No local financial or technical support
No defined end user
No local or state control over end use

CT Initiatives to Facilitate & Inform a Network of Stand-alone Operations

- Provide Regulatory Guidance ✓
- Funding Pilot Study ✓
- Hire State Shell Recycling Coordinator ✓
- Convene State Shell Recycling Committee
- Conduct Food Service Establishment Survey

FAIRFIELD SHELLFISH COMMISSION OYSTER SHELL RECYCLING PROGRAM

Oyster Shell Recycling Program: How It Works

1. Local restaurants that serve fresh oysters and clams save and recycle empty shells in provided buckets. Shells are picked up once a week free of charge and clean buckets are left to collect more shells.

Once the shells have cured, they are returned to our local waters by the Shellfish Commission where they are used for on-going restoration projects that help rebuild oyster reefs and grow more oysters.

2. Recycled shells are transferred to our shell collections site where they cure for 6 months. This program has recycled over 68,000 pounds of shell which would have otherwise ended up in a landfill.

The Facts:

- This is a free program sponsored and managed by the Fairfield Shellfish Commission
- Healthy oyster reefs prevent erosion and provide habitat for aquatic animals
- 1 adult oyster filters up to 30 gallons of water a day
- For more information or questions please call (203)246-6403

Tim Macklin

State Coordinator & Committee

Coordinator acts as liaison between state and local officials

Implementing Shell Recycling Programs and Provide Support to Existing Programs

Identify key players

Gather data and trends

Propose ideas for economic incentives

Create public outreach materials

Identify opportunities for the public to learn about food waste and environmental sustainability

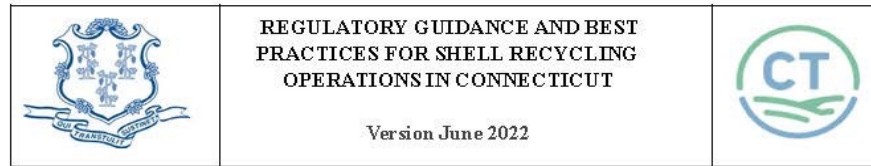

Food Service Establishment Survey

- Gauge current participation, interest, motivations and hurdles to shell recycling.
- Target audience - the food service sector: restaurants, seafood retailers, and shellfish producers involved in direct marketing to consumers.

Regulatory Guidance

Contact Information:

Connecticut Department of Agriculture, Bureau of Aquaculture
P.O. Box 97 Milford CT 06460

Table of Contents:

1. Introduction
 - 1.1. Purpose
 - 1.2. Background
 - 1.3. Regulatory authority
2. Regulatory Guidance and Best Practices
 - 2.1. Submit draft proposal to CT DOAG BA for initial review
 - 2.1.1. Shell sources
 - 2.1.2. Reuse of shells
 - 2.1.3. Shell collection (waste management goes here)
 - 2.1.4. Shell transportation
 - 2.1.5. Shell storage and pile maintenance
 - 2.1.6. Sanitation station and maintenance
 - 2.1.7. Agreements with partners and subcontractors
 - 2.2. Submit proposal to municipal officials and seek final authorization

Regulatory Guidance

Minimum Components of a shell recycling proposal:

- Identify shell source
- Describe how shells will be reused
- Identify end user, if not the applicant
- Develop schedule and waste management SOP
- Identify transportation to be used, and develop SOP
- Identify shell storage location and develop maintenance SOP
- Identify location for sanitation of equipment and develop SOP that includes a schedule
- Prepare agreements with any partners and subcontractors

Regulatory Policy

- Shell Source: Shells must be from shellfish harvested within the United States
- Cured Shell Planting: No shell may be placed back into the waters of Long Island Sound without written authorization from the CT DOAG BA
- End Use: Applicant or unidentified end user

Next Steps

- Further explore the 5 models: some are up and running, and others are in development
- Conducting Food Establishment Survey
- Convening Shell Recycling Committee
- Modifying the Guidance as needed
